Financial Manager

Industry: service Provider

No. of users: 40

Modules: Accounting, Bill of Materials, Pricing Matrix, Linked accounts, Multi-warehousing, serial number tracking, fixed assets, Point of Sale ?

“Pastel Evolution has allowed us to set up our sales and Bill of Materials according to key customer groups for our direct marketing business and higher volume retail operation. This has given us the facility to detail the many different components in our mail order packages, while keeping track of products being sold for improved inventory control. Having streamlined our Point of Sale (POS) systems on Evolution, invoices can be captured automatically into the system at each outlet, saving head office time and effort at month-end. Evolution’s report writer capabilities are vast. This system allows us to view stock and accounting information at a glance, and generate management reports to highlight, for example, margins per item. With Evolution, journals can now also be imported directly into the system, circumventing the need to capture entries line by line. With our GL accounts pre-defined only the figures are modified every month, which has reduced the risk of human error. **Journals now take three minutes, rather than two to three days to complete.**” – David Aronowitz, Financial Manager, Homemark (Pty) Ltd
